

Advanced OCR

We currently used Google ML toolkit to read such kind of index. The toolkit isn't robust enough and in several case, the reading is not OK. In addition we need to read the red box as well, and as you can see this might vary.

The task for this is to find/setup a robust OCR. The task is to create a small app in flutter to be integrated into a global project

We have to extract infos from measurement device. We need to extract value in Ohm or in MegOhm. Ideally the system should understand the unit. In addition we would like to verify that the device is in the correct mode R ISO ou R EARTH. *For this same scope than previous, flutter code to be integrated into a global project*

We do have a lot of pictures in good quality but without annotations
